

# POTASSIUM BICARBONATE

Deacidification agent

## CHARACTERISTICS

*Crystal-like powder with salty flavor, soluble in water (20%).*

## APPLICATIONS ON WINE

*It is one of the best deacidification agent, both for its neutralization capacity and for the positive consequences on quality of the treated product*

## INSTRUCTIONS FOR USE

*Theoretically, 1,33 g/L are necessary to diminish 1 g/L of total acidity.  
The addition of potassium bicarbonate is performed directly to the mass while stirring.  
Do not fill the tank completely in order to allow the exhaust of the gas resulting from the reaction.*

## COMPOSITION

*Potassium Bicarbonate:  $\text{KHCO}_3$*

## PACKAGE

*1 Kg pack - 25 Kg bags*

## STORAGE

*The product is not hygroscopic; anyhow, store in a cool and dry ambient.*
