

TANNRED

Tannin for Red Vinification

CHARACTERISTICS

TANNRED is a special blend of condensed and hydrolysable tannins, a very fine light beige-brown powder, easily soluble in water or wine, with an astringent taste and slightly fruity aroma.

TANNRED has a high surface electric charge.

APPLICATIONS

We suggest using TANNRED on the mash from the beginning of vinification. Noble condensed tannins (proanthocyanidins) contained in TANNRED improve the polyphenol structure, increasing the formation of stable covalent bonds with colouring substances, in wines having an unbalanced anthocyan/tannin ratio, as in the case of short macerations, low-temperature in pre-fermentative phases and grapes poor in total polyphenols.

The presence of ellagic tannins characterised by a strong antioxidant and antiradical power allows TANNRED to protect colour against oxidation and the enzymatic degradation of the polyphenoloxidase from when the crushing starts and from the beginning of extraction.

DOSES AND INSTRUCTIONS FOR USE

10-30 g/hl in vinification, divided when filling the fermenter and after 48 hours.

Dissolve the product in water or wine in a ratio of 1:10 and add it homogeneously to the mass.

NOTES: It is advisable to carry out laboratory tests in order to define the optimum dosage and avoid undesired colloidal effects.

COMPOSITION

Mixture of condensed and hydrolysable tannins

PACKING

1 kg package, 20 kg bag

This product is not dangerous. No safety data sheet is required.
